

Task:

Choose any company or website such as Amazon, Flipkart, Netflix, Instagram, Facebook, YouTube, Swiggy, Zomato, etc.

Prepare a report containing:

- 1. Company Name - Instagram**
- 2. What Services Does the Company Provide?**

Instagram is a social networking platform that allows users to:

- Share photos and videos
- Create Stories and Reels
- Send direct messages (DMs)
- Follow friends, celebrities, and businesses
- Live stream videos
- Advertise products and services
- Create and manage business accounts

- 3. What User Data Might the Company Collect?**

Personal Information

- Name
- Username
- Date of Birth
- Gender

Contact Information

- Email Address
- Phone Number

Location Information

- Address (if provided)
- GPS Location
- IP Address

Payment Information

- Debit/Credit Card Details
- Billing Address
- Transaction History

Other Information

- Photos and Videos uploaded
- Messages and Chats
- Device Information
- Search History
- Followers and Following List
- Browsing Activity
- Login Records

4. What Cyber Attacks Could Target Instagram?

1. Phishing Attack

Attackers create fake Instagram login pages to steal user credentials.

2. Data Breach

Hackers gain unauthorized access to databases containing user information.

3. Ransomware Attack

Malware encrypts company data and demands payment for recovery.

4. Account Takeover

Attackers obtain usernames and passwords and gain control of user accounts.

5. DDoS (Distributed Denial of Service) Attack

A large amount of fake traffic is sent to Instagram's servers, making the service unavailable.

5. What Would Happen if Instagram Were Hacked?

If Instagram were successfully hacked:

- Millions of user accounts could be compromised.
- Personal information could be leaked.
- Private messages and photos could become public.
- Users may lose access to their accounts.
- Financial information could be stolen.
- The company's reputation would be damaged.
- Users could lose trust in the platform.
- The company could face legal penalties and financial losses.

6. Suggest at Least 5 Security Measures to Protect the Company

1. Multi-Factor Authentication (MFA)

Require users and employees to verify identity using an additional authentication method.

2. Strong Password Policy

Enforce complex passwords and regular password updates.

3. Data Encryption

Encrypt user data during storage and transmission.

4. Regular Security Audits

Conduct vulnerability assessments and penetration testing.

5. Employee Cybersecurity Training

Train employees to recognize phishing emails and security threats.

6. Network Monitoring

Monitor network activity continuously for suspicious behavior.

7. Regular Backups

Maintain secure backups to recover data after cyber incidents.

7. If You Were the Cyber Security Manager, What Would Be Your First 3 Actions?

Action 1: Strengthen Access Control

Implement Multi-Factor Authentication (MFA) for all employees and administrators and review user access permissions.

Action 2: Conduct Security Assessment

Perform vulnerability scanning and penetration testing to identify weaknesses in the system.

Action 3: Establish Continuous Monitoring

Deploy security monitoring tools, intrusion detection systems, and incident response procedures to quickly detect and respond to attacks.

Cyber Security Report on YouTube

1. Company Name - YouTube

2. What Services Does the Company Provide?

YouTube is a video-sharing platform that allows users to:

- Upload and watch videos
- Live stream content
- Subscribe to channels
- Comment and interact with creators
- Earn revenue through advertisements
- Create playlists and share videos

3. What User Data Might the Company Collect?

Personal Information

- Name
- Username
- Date of Birth

Contact Information

- Email Address
- Phone Number

Location Information

- IP Address
- GPS Location

Payment Information

- Credit/Debit Card Details
- Billing Information
- Purchase History

Other Information

- Watch History
- Search History
- Comments and Likes
- Device Information
- Subscription List

4. What Cyber Attacks Could Target YouTube?

1. Phishing Attack

Fake emails or websites trick users into revealing login credentials.

2. Data Breach

Hackers steal user or creator information from company databases.

3. Ransomware Attack

Malware encrypts company files and demands payment.

4. Account Takeover

Attackers gain access to creator or user accounts.

5. DDoS Attack

Massive traffic floods servers, causing service disruption.

5. What Would Happen if YouTube Were Hacked?

- User accounts could be compromised.
- Videos could be deleted or modified.
- Private information may be leaked.
- Creators could lose revenue.
- Service interruptions may occur.
- Company reputation would be damaged.
- Financial losses and legal issues could arise.

6. Suggest at Least 5 Security Measures

1. Multi-Factor Authentication (MFA)
2. Data Encryption
3. Regular Security Audits
4. Secure Backup Systems
5. Employee Cybersecurity Training
6. Intrusion Detection Systems
7. Strong Password Policies

7. If You Were the Cyber Security Manager, What Would Be Your First 3 Actions?

1. Enable MFA for all employees and creators.
2. Conduct vulnerability assessments and penetration testing.
3. Implement 24/7 security monitoring and incident response plans.

Cyber Security Report on Amazon

1. Company Name - Amazon

2. What Services Does the Company Provide?

Amazon provides:

- Online shopping
- Digital payments
- Cloud computing services
- Video and music streaming
- Logistics and delivery services
- Online marketplace for sellers

3. What User Data Might the Company Collect?

Personal Information

- Name
- Date of Birth

Contact Information

- Email Address
- Phone Number

Address Information

- Home Address
- Shipping Address
- Billing Address

Payment Information

- Credit/Debit Card Details
- Bank Information
- Transaction Records

Other Information

- Purchase History
- Search History
- Device Information
- Login Records
- Customer Reviews

4. What Cyber Attacks Could Target Amazon?

1. Phishing Attack

Fake Amazon emails may steal customer login credentials.

2. Data Breach

Unauthorized access to customer or seller databases.

3. Ransomware Attack

Critical business systems may become encrypted.

4. Account Takeover

Hackers gain access to customer accounts and place fraudulent orders.

5. DDoS Attack

Attackers overwhelm servers with traffic, causing downtime.

5. What Would Happen if Amazon Were Hacked?

- Customer data could be exposed.
- Financial information could be stolen.
- Fraudulent purchases could occur.
- Seller accounts may be compromised.
- Delivery operations could be disrupted.
- Significant financial losses could occur.
- Customer trust would decrease.

6. Suggest at Least 5 Security Measures

1. Multi-Factor Authentication (MFA)
2. End-to-End Data Encryption
3. Regular Penetration Testing
4. Network Security Monitoring
5. Secure Backup and Recovery Plans
6. Employee Awareness Training
7. Access Control and Least Privilege Policies

7. If You Were the Cyber Security Manager, What Would Be Your First 3 Actions?

1. Review and strengthen access controls across all systems.
2. Conduct comprehensive security audits and vulnerability scans.
3. Establish continuous monitoring and an incident response team.

Conclusion

Instagram, YouTube, and Amazon are widely used digital platforms that store large amounts of personal, financial, and behavioral user data. Because of their popularity and the sensitive information they handle, they are common targets for cyber threats such as phishing, data breaches, ransomware, account takeovers, and DDoS attacks. A successful cyber attack could lead to data loss, financial damage, service disruption, and loss of customer trust. Therefore, implementing strong cybersecurity measures such as multi-factor authentication, encryption, regular security audits, employee training, and continuous monitoring is essential to protect both the companies and their users from cyber threats.
